The \$44.99 \$29.99 From Shares Description Additional Information 90 Day Job Guarantee Pull from Emachine 90 Day Guarantee includes a 2.4ghz Athlon 64 processor and a 1gb ram also used in Acer and Gateway machines. Other compatible parts numbers: 4006254R , ET1161 , 4006254R, GT5668E Manufacturer: ECS Model: MCP61PM-GM REV 2.2 From workers eMachines MB. P3809.013 Sold with AMD Athlon LE-1620 2.4GHz processor with 1GB of RAM and HSF I/O Plate processor: 240-contact DDR2 DIMM 800/667/533/400 Double Channel (8GB Max) Video: - NVIDIA GeForce 6100-based 2D/3 D Engine Audio: LAN: Integrated Realtek RTL8201N 10/100 MB LAN Expansion: 1x PCIe x16 (also running in x8) PS/2 Keyboard/Mouse - 1x VGA - 4x USB - 1x RJ-45 - Audio Port Form Factor: uATXCondition: Refurbished Consiction field under common product details should be filled Hi, I read the messages for this mobo, but there are too many mixed to say. The ECS support says it was up to the gateway as they set them up. Apparently the revision (2.4) was the decisive factor on this issue. Gateway has the first specifications, but not for change. So all the confusion. I would change from the CPU (Athlon 2 or Phenom 2 ?) quad core to about 95w. Some say he will cope with this, others say no. Before I spend your limited money, I hope that one of the many compupeople out there can help. Thank you guys! Emachine ET1331g-03w: AMD Athlon 2 x2 235e, Nvidia 6150SE, 6GB DDR2, Win7 Home Premium 64bit 0 Review is nowhere printed on the board? That's the way it should be. If you can't find a revision on the board, then if ecS can't tell you, and gateway (do they make eMachines? really? ah.) can't tell you, then I wouldn't take any chances. 0 Review is not printed anywhere on the board? That's the way it should be. If you can't find a revision on the board, then if ecS can't tell you, and gateway (do they make eMachines? really? ah.) can't tell you, then I wouldn't take any chances. It's there in the main title - Rev.2.4. Any help would be appreciated. There is almost nothing about this revision regarding specifications. Gateway bought out Emachines or merged them (I can't remember immediately). But they're kinda like HP and Compaq now, I think. I heard one other person who said it would take 95w processors? But I can't find anyone who knows for sure. Right now, these processors are pretty cheap, so I'd like to be able to do it, but my BUDGET says to be sure of it first. 0 Sorry ... I thought you meant that the Rev 2.4 board would take a faster processor, but you didn't know what revising your board was. In any case, since processors are usually not refundable, my answer remains the same - if not sure, don't buy. 0 That's why I asked techno masters there. Someone needs to know. Thanks for posting though. Hopefully someone else will have something more to add. It's almost as if this mobo doesn't EXIST with this revision. I was able to find one or two that say it would support up to 95w. but once again. No for sure. Page 2 I plan on my first computer build, but what bothers me so much is my motherboard. I'd like a motherboard, the am3/crossfire-enabled socket, 1600 ddr3 sdram support with max at least 16GB, at least 1 usb 3.0, at least 4 USB 2.0, at least 2 pci-e 2.0 slot, at least 1 pci-e slot, sata 6.0gb/s and as many fan slots as I can get. But here's the catch: I want it to be 110- or less (WORLD count). Please any helpful entry is welcome! Thank you 0 Best response selected skiunitid. Page 3 I want to replace my motherboard and processor, but I don't know what will work in my computer. Currently I have an M2N78-LA (purple). Does anyone know a compatible replacement? 0 The fact that it's made for HP means that it probably has its own layout for section I/O, as well as the standoff where MB screwed. So you won't be able to just drop in the replacement keyboard. Sorry, but that's what you get when you buy your own stuff like HP and Dell. © 1996-2014, Amazon.com, Inc. or its affiliates Einige Word-Funktionen können in Google Docs nicht angezeigt werden und werden bei entferntDetails anzeigenLetzte anzeigen Video VGA, Chipset, Ethernet, SMBus - Download Drivers for ecs mcp61pm-gm 2.4. mcp61pm-gm rev 2.4 manual. mcp61pm-gm rev 2.4 drivers. mcp61pm-gm rev 2.4 bios. mcp61pm-gm rev 2.4 motherboard. mcp61pm-gm rev 2.4 cpu support
